## INTRODUCTION

Prestige 3D Antibac Blue is an antibacterial 3 compartment power and data trunking system designed to kill bacteria which can grow on surfaces such as trunking systems.

It uses a silver based additive inherent within the PVCu which acts as an effective weapon in fighting bacteria such as MRSA and other harmful bacteria. The silver additive is a bactericide and will therefore kill bacteria instead of just restricting their growth.

As the additive is inherent within the PVCu compound the antibacterial protection runs throughout the products themselves. There is no loss of protection where the trunking lengths are cut on-site or if the trunking surface becomes scuffed or scratched.

The Antibac Blue additive depends on intimate contact between surfaces of the trunking and the user, so any barriers such as dirt or grime will reduce or negate the antibacterial effect. Please refer to the Cleaning & Care section of this leaflet for further information.

## PLANNING THE INSTALLATION

- **Establish Layout, Paying Particular Attention To:-**
  - Direction Changes
  - Feed Positions
  - Component Spacing
- **The carrier components are not treated with the Antibac Blue additive. As such these must always be fixed onto a surface such that they cannot be touched, ie. no overhangs are allowed where the back of the trunking (extrusion or moulding carrier) can be touched. For further installation instructions please refer to the PRESTIGE 3D installation guide 48396PL.**

To ensure a safe installation, this product must be installed by a competent person, in accordance with the current edition of the IEE Wiring Regulations (BS 7671) and Building Regulations.

## CLEANING & CARE

Prestige 3D Antibac Blue is **not** intended to replace standard cleaning regimes. It is an additional protection which can only operate efficiently if the surfaces are kept free of dirt and grime. The exterior of the trunking can be cleaned using a damp cloth with a mild detergent, which must be thoroughly wiped off. It can also be cleaned using Ultraviolet light. The trunking must never be cleaned using waxes or other polishes which produce a barrier between the trunking surface and the user.

The trunking must never be painted or otherwise decorated as this will produce a barrier between the trunking surface and the user. This will result in reduced or total loss of the antibacterial effect of the Antibac Blue additive until the PVCu trunking surface is once more exposed.

Before hand-over to the client the entire trunking run must be thoroughly cleaned as described above.

## PRODUCT IDENTIFICATION

The exposed parts of the items listed below are manufactured with the Antibac Blue additive, and glow bright blue under UV light. All other components are manufactured with the standard PVCu, and exhibit a very dull purple under UV light.

Description/List no.		Description/List no.	
Straight Cover VPAB100		Dado Joint Cover VPAB184	
Curved Cover VPAB110		Skirting Joint Cover VPAB194	
Square Cover VPAB115		Dado Flat Angle VPAB185	
Socket Spacer VPAB129		Skirting Flat Angle Up VPAB195

Dado End Cap VPAB183		VXAB40 Part M Flange	
Skirting End Cap VPAB193		VXAB41 Part M Socket Spacer	

## GUARANTEE

The Company undertakes to replace or repair at its discretion, products should they become defective within 10 years in the case of Cable Management products, solely as a result of faulty materials or workmanship. Understandably, if the product has not been installed or maintained in accordance with the Company's instruction, has not been used appropriately, or if any attempt has been made to rectify, dismantle or alter the product in any way, the guarantee will be invalidated.

This Guarantee states the Company's entire liability. It does not extend to cover consequential loss or damage or installation costs arising from the defective product. This Guarantee does not restrict or infringe the normal statutory or other rights of the consumer.
